Profile

Motivated and detail-oriented Information Technology student with a strong foundation in software development, data structures, and algorithms. Skilled in multiple programming languages including Java, Python, C#, and JavaScript, with hands-on experience in developing full-stack applications and database-driven systems. Adept at applying object-oriented programming principles and building efficient, maintainable code. Demonstrates excellent problem-solving abilities, teamwork, and communication skills, developed through academic projects and collaborative environments. Eager to contribute to innovative technology solutions and grow within a dynamic development team.

Certificates

- Network Security Management Chongqing Polytechnic University of Electronic Technology (2024)
- Microsoft AI Fluency Course Microsoft (2025)

Skills

Technical Skills

- **Programming Languages:** Java, Python, C#, JavaScript
- **Web Development:** ASP.NET, .NET Framework, Node.js
- **Database Management:** MySQL
- **Software Development Practices:** Object-Oriented Programming (OOP)
- **Tools & Environments:** Github, Git, Visual Studio Code, MySQL Workbench
- **Debugging & Testing:** Debugging, Troubleshooting

Soft Skills

- Effective Time Management
- Strong Written and Verbal Communication
- Analytical and Critical Thinking
- Team Collaboration

Education

Vanderbijlpark,
South Africa

Bachelor Of Science In Information Technology
North West University

Projects

Cisco Packet Tracer Network Design – Office Expansion

Designed and simulated a scalable, secure, and cost-effective network for a company's office expansion using Cisco Packet Tracer.

- Developed a layered network topology with core routers, VLAN-segmented switches, and wired/Wi-Fi access points
- Configured VLANs, DHCP, and subnetting to support departmental isolation and internet access
- Managed a budget with a detailed cost breakdown for devices, cabling, and contingencies
- Logged and resolved issues such as subnetting errors and Packet Tracer limitations
- Proposed real-world extensions including VPNs, firewalls, and UPS backup solutions
- Demonstrated strong skills in network design, troubleshooting, and project planning
- Collaborated via GitHub for version control, issue tracking, and documentation

- **Tools Used:** Cisco Packet Tracer, GitHub, VLANs, DHCP, Subnetting

Green Valley Estate Database System

Designed and implemented a centralized database system to streamline operations across departments including Security, Maintenance, Finance, and Community Services.

- Created ERDs and both logical and physical data models with 15+ normalized entities
- Implemented SQL components including tables, indexes, sequences, and views for optimized performance
- Populated tables with realistic sample data to support testing and simulation
- Developed complex SQL queries for reporting, analytics, and operational insights
- Demonstrated strong skills in database design, normalization, and SQL performance tuning

Tools Used: Oracle SQL, Crow's Foot Notation, Database Normalization

AI Chatbot Integration

Developed a simple chatbot to assist users with common queries on an academic website using JavaScript and Node.js.

- Implemented condition-based responses to handle frequently asked questions
- Tested user interactions to ensure accuracy and responsiveness
- Enhanced user experience by providing instant feedback and navigation assistance
